Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 2, 5, 6 and 9, drawn to transgenic plants/productive materials from which DNA flanked by site-specific recombinase recognition sequences have been removed by transient expressing site-specific recombinase .

Group II, claim(s) 10, drawn to a method of removing DNA sequence by transiently expressing site-specific recombinase.

Group III, claim(s) 3-4, 7-8 and 11, drawn to a method of transposing transposons having no transposase by transiently expressing the transposase and the resulting transgenic plants and reproductive materials.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking the inventions of Groups I and II is the transient expression of a site-specific recombinase to remove DNA flanked by its recognition

sites in a plant. However, this method is anticipated by Gleave et al.(1999, Plant Molecular Biology 40:223-235), who teach that the loxP-flanked gene is removed by transiently expressing Cre site-specific recombinase (abstract), and therefore does not constitute a special technical feature as defined by PCT Rule 13.2, because it does not define a contribution over the prior art.

The technical feature linking the inventions of Groups I-II and III is a method of removing an element flanked by an enzyme recognizable sequence by transiently expressing the enzyme. However, this method is also anticipated by Gleave et al. as discussed above and therefore does not constitute a special technical feature as defined by PCT Rule 13.2, because it does not define a contribution over the prior art.

Applicant's claims encompasses multiple inventions and do not have a special technical feature that links the inventions one to another and they, therefore, lack of unity of invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
